

ibi™ WebFOCUS® Analytics Cloud Select

A Better Cloud for Data and Analytics - Flexible, Fast, Efficient

Key Benefits:

- Purpose built to drive business outcomes from data and analytics
- Turnkey managed services make any deployment fast and easy
- Complete flexibility in environmental and service levels
- Ability to combine any product and service, wherever you need it
- A monitored environment with investigated alerts, allowing you to focus on customer service

To meet your organization's goals, the ibi WebFOCUS Analytics Cloud Select environment is the fastest, most efficient way to run WebFOCUS data and analytics software. ibi provides fast, flexible, reliable deployment. You can build a solid data foundation on a trusted and governed source of enterprise data and establish a data value-chain for intuitive, self-service analytics that lets users create, publish, share, and collaborate.

ibi Cloud Management

Leading organizations use our cloud-native architecture for optimal performance. The ibi WebFOCUS Analytics Cloud Select solution provides turnkey 24/7 support, dedicated cloud experts, and fully managed environments, helping you launch cloud-native apps in minutes. It powers your infrastructure strategy at any stage or size, making sure that you have the flexibility to efficiently manage your cloud needs.

The ibi WebFOCUS Analytics Cloud Select Turnkey Managed Service

- White-glove, fully managed service provides a dedicated, single-tenant cloud environment with turnkey managed services for maximum ease and efficiency.
- Dedicated cloud solution experts help you launch cloud-native apps in minutes, 24/7, and monitor to ensure peak application and infrastructure performance.
- Single-tenant environment isolates your sensitive applications and VMs and offers complete control and customization for unique needs.
- Periodic service reviews assess and optimize platform performance aligned to your key performance indicators (KPIs).
- Automated security updates keep your cloud operations protected.
- Flexible maintenance scheduling for convenient control.
- Automatic daily backups without work or worry.

- Seamless software upgrades of your products in production and non-production environments keeps you conveniently up to date.
- ibi as your single point of contact and escalation streamlines your support experience by detecting incidents and proactively notifying you.
- All the powerful, modern features of running on either AWS or Azure.
- Distribute boardroom quality reports and consumer facing apps to countless stakeholders.

Capabilities

Cloud-native technology

WebFOCUS Analytics Cloud Select is built on the latest cloud-native technology including Kubernetes, the industry-standard open-source choice for containerized architectures.

Deployment choices

Your WebFOCUS Analytics Cloud Select instance can be auto-deployed for your devOps pipeline, which allows you to streamline your app development and deployment with components. Deploy based on your cloud strategy and architecture and rely on us to support you throughout your cloud journey.

Flexible architecture (coming soon)

In addition to standard industry containerized deployment using Kubernetes, WebFOCUS Cloud software offers powerful tools such as Helm charts, ELK Stack, and Prometheus. Kubernetes simplifies set up, upgrades, snapshots, scaling, high availability, security, and more.

Speed

Your fully configured environment is up and running in just a few minutes, with production-ready code. We've built speed into every aspect, and we stand behind our published SLAs with continuous application and infrastructure monitoring. Our award-winning support team ensures your success, helping you quickly answer any question and handle every challenge.

Simple admin

Operating in the cloud has obvious benefits, and our simple admin makes it even easier. Get full visibility into all activity, including audit trails, logs, billing, and usage. Understand all aspects of access and

the level of resources your staff uses. Also receive timely notifications in the event of any violations. IT admins, security analysts, and cloud architects will appreciate a cloud solution that helps reduce operational liability—instead of adding complexity.

Flexibility

For the lowest possible operational cost, your WebFOCUS Analytics Cloud Select instance intelligently optimizes resources to assign more capacity when needed and releases resources when workloads require less capacity. Save money and gain the flexibility to support workflows with unpredictable or evolving workload requirements.

Security

WebFOCUS Analytics Cloud Select software makes no tradeoffs when it comes to enterprise-grade security. We provide native identity federation and encryption, along with granular access controls. Be confident that your organization's security policies are extended to the cloud environment. The WebFOCUS Cloud environment is safe for all users—a secure private network employing data and workload isolation alongside integrated, industry-leading compliance options.

Connectivity

Whatever your data ecosystem, we can connect to it, even when competitors can't. Connectivity is our strong suit. We connect your on-premises data to the cloud, maintain live connections to on-premises assets, and to published extracts of that data, and connect to cloud apps. High-level integration is the only way to deliver enriched datasets crucial to providing value for your business outcomes. The easiest way to move and operate is in the cloud.

Cloud migration

Our discovery and assessment solution provides a secure, repeatable, and scalable path to the cloud. Maximize migration success with a plan tailored to address the requirements of your business applications. The process follows these steps, supported throughout by WebFOCUS Cloud experts:

- Discover your business intelligence (BI) and data infrastructure and application landscape
- Create application-to-asset mapping to validate application footprint
- Run an application-affinity analysis to map interdependencies between applications and develop a high-level plan for migration

Cloud Setup and Deployment

ibi conducts an architecture review of your data and analytics needs and creates a solution architecture report that details requirements:

- Network infrastructure considerations, such as firewalls and ports
- Configuration of data adapters
- Knowledge transfer to your relevant personnel so they may add more data adapters as required
- Initial tuning

Learn more about ibi's solutions, and how we enable the world's largest enterprises to migrate to the cloud and harness the power of data to drive informed decision-making across their organizations.
