Accelerate digital transformation through business process automation

Robotic process automation

The explosion of data derived from sensors, mobile technology, files, applications, email, data warehouses, and other devices forces private and public sector companies and governments to creatively and proactively leverage technology for digital transformation and business agility. Robotic process automation (RPA) and business analytics maximize the value of data, transforming it into actionable information that improves decisions, automates processes, and eliminates human involvement in repetitive tasks.

RPA generates and gathers data that allows companies to analyze and act on advanced metrics. Organizations can streamline business processes, monitor operating performance, and quickly achieve specific benchmarks and goals.

Blue Prism Digital Workers enable automation orchestration across all corporate applications and systems in continuous feeds.

Robotic process automation and analytics

Together, analytics and RPA are an unparalleled force to accelerate automation and drive digital transformation. RPA with analytics helps organizations reinvent work processes so employees achieve optimal productivity with accountability. Digital workers take manual and repetitive tasks while your employees focus on the jobs that require ingenuity and expertise. This modernized approach to automation fosters process efficiency to help employees quickly make the right decisions, not bad ones. Coupling Blue Prism Digital Workers with the ibi data and analytics platform ensures augmented analytical success for any organization.

Why Blue Prism and ibi

The ibi data and analytics platform provides a complete data management solution with the ability to consolidate, reconcile, cleanse, master, and analyze data – regardless of its origin or format – and then transform it into actionable, visual analytics.

With trustworthy data and access to visualizations, ibi and Blue Prism deliver an intelligent Digital Workforce that operates autonomously. Self-governing process automation accelerates digital transformation and decision-making for any industry. RPA performs a substantial amount of operations in parallel – from desktop, machine, sensor, and cloud environments. Organizations can deploy additional Digital Workers quickly and with minimal costs, according to work flux, demand, and performance.

Connect all enterprise systems, databases, files, and applications

Cleanse and master data for trustworthy, reliable, and augmented analytics

Automate processes to support and speed digital transformation

Help digital workers **communicate** and connect with disparate sources and people

Remove non-value-add activities from manual processing

Together, ibi and Blue Prism offer an end-to-end, scalable solution that saves time and money while increasing process efficiency. This partnership empowers your organization to:

- > Build and deploy automations that improve both the productivity and quality of your operations
- > Measure, report, and align RPA operations with strategic business outcomes
- > Define, track, measure, and share process KPIs that measure the value and impact of a company's overall automation strategy
- > Achieve operational intelligence through augmented analytics and data management
- > Share dashboards across the enterprise, monitor landmark key performance indicators (KPIs), send and receive push notifications of critical events, and use predictive analytics to forecast future states and milestones

Organizations can capitalize on trustworthy data, analytics, and process automation as the foundation for innovation, growth, responsiveness, and digital transformation. Automate at a fraction of the cost and with unprecedented speed. Use your existing infrastructure without disrupting underlying systems, which would be difficult and costly to replace. The extensible, scalable, and flexible solution delivered by ibi and Blue Prism ensures strategic, operational, and business predictability.

About Blue Prism

Blue Prism's vision is to provide a Digital Workforce for Every Enterprise. The company's purpose is to unleash the collaborative potential of humans, operating in harmony with a Digital Workforce, so every enterprise can exceed its business goals and drive meaningful growth, with unmatched speed and agility. By strategically applying intelligent automation, organizations are creating new opportunities and services, while unlocking massive efficiencies that return millions of hours of work back into their business. Visit www.blueprism.com to learn more. (AIM: PRSM).

About ibi

ibi is a data and analytics company that embeds intelligence into — everything. From the beginning, ibi has known the importance of data and insights to make better decisions. We help organizations get their complex and disconnected data in order, so they can build, embed, and automate intelligence into everything they do. By preparing organizations for the future and turning them into builders – information builders – everyone can use enterprise trusted data at scale to drive their growth. Whether our customers use pre-built applications or build their own solutions for their data and analytics challenges, ibi powers their innovation and reinvention. ibi's open platform and industry-specific building blocks accelerate speed to market, improve operational efficiency, and enhance their customers' experience.

ibi. build a better future.
